Long Range Planning 56

Executive Summary

Mission

To promote well-being and quality of life with dignity for older adults in our community.

Vision

To support older adults, their families, and caregivers to achieve safe, healthy, independent, and self-reliant lives.

The Harris County Area Agency on Aging (HCAAA), a division of the Houston Health Department, is responsible for planning, coordinating, and administering services for adults age 60 and older throughout Harris County. Guided by the Older Americans Act, Texas Administrative Code, and the policies of the Texas Health and Human Services Commission, HCAAA is charged with assessing community needs, directing resources, and ensuring the delivery of high-quality programs that promote independence, dignity, and quality of life for older adults. Through the Houston Health Department's broader public health leadership and commitment to healthy aging initiatives, the agency plays a central role in advancing coordinated, community-based strategies that support older adults across the region.

Through strategic planning, oversight of contracted providers, and coordination with community partners, HCAAA ensures that federal, state, and local resources are used effectively to address the needs of older residents and their caregivers. Particular attention is given to individuals with the greatest economic and social need, including low-income older adults, individuals with disabilities, those living alone, and residents who may face cultural or language barriers when accessing services.

Community Context and Demographic Trends

Harris County is one of the largest and most diverse counties in the United States. According to the U.S. Census Bureau and the American Community Survey, the county's population exceeds 5 million residents, making Harris County the third-most populous county in the nation. Although the region maintains a relatively young median age, the number of older adults continues to grow steadily.

Current census estimates indicate that approximately 12.3 percent of Harris County residents—more than 600,000 individuals—are age 65 and older, and this population is expected to increase significantly in the coming decade. As life expectancy increases and population growth continues, Harris County will

experience sustained demand for services that support healthy aging and independent living.

The county is also characterized by exceptional cultural and linguistic diversity. American Community Survey data indicate that Harris County's population is approximately 45 percent Hispanic or Latino, about 21 percent Black or African American, and approximately 8 percent Asian, with many additional cultural communities represented.

These demographic trends underscore the need for a coordinated aging services system capable of addressing challenges commonly associated with aging, including food insecurity, transportation barriers, social isolation, caregiver stress, and difficulty navigating complex health and social service systems. As the population of older adults grows, maintaining strong community-based services and supports will be essential to promoting independence and well-being.

HCAAA's Role in Supporting Healthy Aging

The 2027–2029 Area Plan positions HCAAA to respond to these demographic trends by strengthening a coordinated system of home- and community-based services designed to help older adults remain healthy, engaged, and independent.

HCAAA administers and oversees a network of programs that address the nutritional, social, and supportive needs of older adults and their caregivers. These programs include congregate and home-delivered nutrition services, caregiver support and respite services, benefits counseling, information and referral assistance, and long-term care ombudsman advocacy for residents of nursing facilities and assisted living communities.

A central component of the agency's service delivery system is the Aging and Disability Resource Center (ADRC), which provides a coordinated entry point for individuals seeking assistance. Through the ADRC, older adults, individuals with disabilities, and caregivers receive information, options counseling, and connections to community services that support safe and independent living. The ADRC also operates within the statewide No Wrong Door system, ensuring that residents can access accurate information, screening, and referrals regardless of where they first enter the long-term services and supports network.

Community-based services play a critical role in improving health outcomes and quality of life for older adults. Programs such as home-delivered meals, caregiver respite, transportation assistance, and benefits counseling help reduce social isolation, support family caregivers, and delay or prevent unnecessary institutional care. Through its provider network, HCAAA ensures these services reach older

adults across the geographic, cultural, and socioeconomic diversity of Harris County.

Strategic Stewardship and Program Administration

To effectively administer federal, state, and local resources, HCAAA operates within a stewardship framework that emphasizes operational oversight, community engagement, workforce development, and fiscal accountability.

HCAAA maintains strong operational oversight through eligibility verification, provider monitoring, performance measurement, and compliance reviews. These activities ensure that services funded under the Older Americans Act meet federal and state requirements while delivering measurable benefits for older adults and caregivers.

Community engagement remains central to the agency's planning process. The Harris County Area Planning Advisory Council (APAC) meets regularly to gather input from community members, service providers, and stakeholders. This engagement helps identify emerging needs, inform funding priorities, and strengthen collaboration across the regional aging services network.

HCAAA also invests in ongoing training and technical assistance for staff and contracted providers to strengthen service delivery and maintain compliance with federal and state regulations. Participation in statewide conferences and professional development opportunities further enhances the expertise and capacity of the local aging services network.

Responsible stewardship of public funds is a core function of the agency. HCAAA maintains rigorous fiscal oversight through budget monitoring, provider fiscal training, and contract management processes designed to ensure that all expenditures align with grant requirements and program objectives.

Looking Ahead

The population of older adults in Harris County will continue to grow significantly in the coming years as demographic trends reshape the region's age profile. This growth will increase demand for accessible, culturally responsive, and coordinated services that support healthy aging and independent living.

Through the 2027–2029 Area Plan, HCAAA will strengthen the county's aging services network by expanding community partnerships, improving access to critical supports, and ensuring equitable service delivery across Harris County. Guided by the priorities of the Texas Health and Human Services Commission and the principles of the Older Americans Act, the agency will continue to invest in

evidence-based programs, support family caregivers, and address social determinants of health that affect the well-being of older adults.

Working in partnership with local government, nonprofit organizations, healthcare providers, and community stakeholders, the Harris County Area Agency on Aging remains well-positioned to meet the needs of a rapidly growing and increasingly diverse older population. By advancing a coordinated system of community-based services and maintaining a strong commitment to accountability and innovation, HCAAA will continue to fulfill its mission to promote the well-being and quality of life of older adults with dignity while supporting safe, healthy, and independent lives for residents throughout Harris County.

Organizational Profile

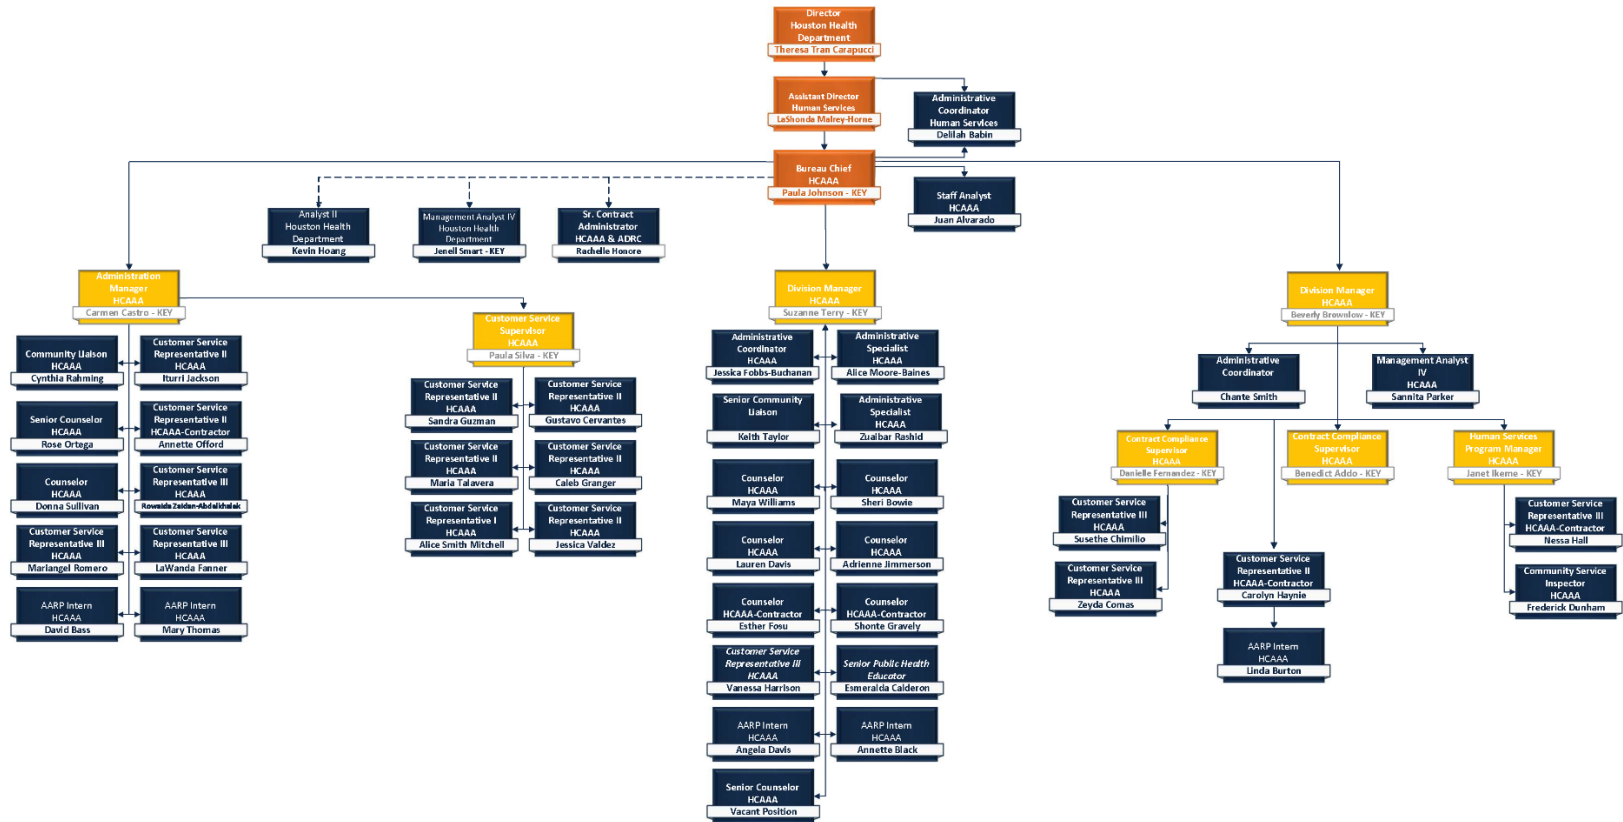

1. Organization and Staff Composition

The Harris County Area Agency on Aging (HCAAA) is a division of the Houston Health Department. It serves as the designated Area Agency on Aging for Harris County under the Older Americans Act of 1965 and its subsequent amendments. As part of a municipal department, HCAAA operates within the administrative structure and oversight of the City of Houston, which functions under a strong-mayor form of government. The City of Houston government consists of a mayor, a city council, and a controller, all elected by Houston residents. Eleven City Council Members are elected from districts, and five are elected at-large, by all voters of the city. In this model, the Mayor provides executive leadership for city operations, with authority over municipal departments and strategic direction for city programs and services.

HCAAA's organizational structure is designed to support the planning, coordination, and delivery of a comprehensive system of aging services. The agency is staffed by a multidisciplinary team that includes program managers, licensed social workers, benefits counselors, outreach specialists, contract and fiscal analysts, and administrative support personnel. This diverse workforce enables the agency to administer critical Older Americans Act programs, provide direct services, and oversee an extensive network of community-based service providers.

Leadership within HCAAA includes a Bureau Chief who provides operational direction, supported by program managers who oversee key functional areas, including access and assistance, caregiver support, nutrition and wellness services, and the long-term care ombudsman program. Staff collaborates regularly with Houston Health Department leadership, city administration, community organizations, and state partners to ensure coordinated, equitable service delivery across Harris County.

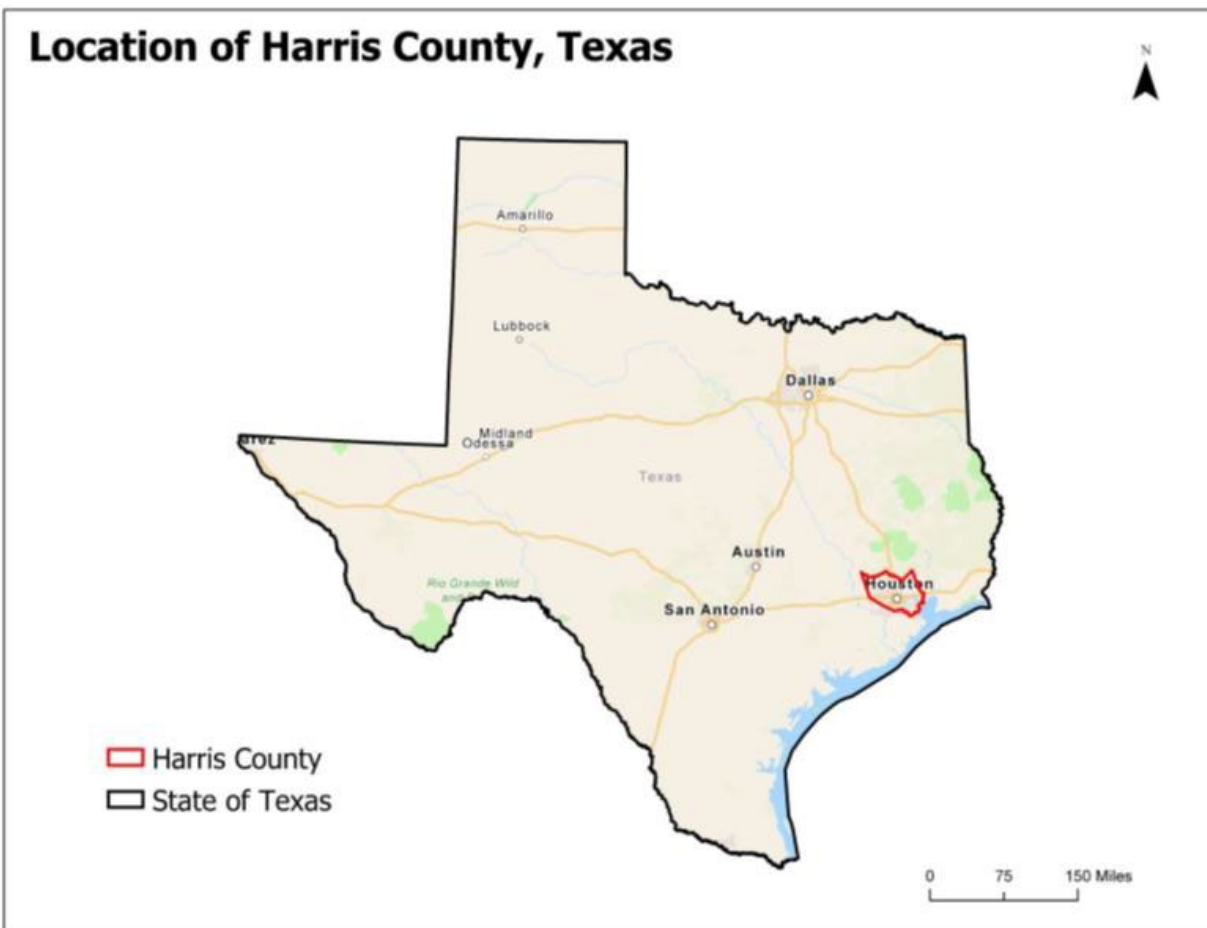

Harris County Area Agency on Aging (HCAAA) and Aging Organizational Chart

Through this organizational structure and professional staff capacity, the Harris County Area Agency on Aging maintains a responsive, data-informed, and community-focused approach to supporting older adults, adults with disabilities, and caregivers throughout the region.

2. Planning and Service Area

Harris County Area Agency on Aging (HCAAA) is Texas’s largest county. Situated in Southeast Texas, it comprises 1,777 miles of vast urban and suburban landscape. The map of Texas below identifies Harris County, outlined in red. Our PSA covers the entire county.

Based on the 2020 Census, Harris County was the third-largest county in the United States, with 4,731,145 residents. Houston is the county seat, and almost half of the county’s population lives within Houston city limits. According to the Census Bureau, in 2022, Harris County was the second-fastest-growing county in the country, with almost 46,000 new residents last year alone, most of the growth

stemming from international migration.¹ Only Los Angeles County (Los Angeles) and Cook County (Chicago) have larger populations, but both have lost population, while Harris County continued to grow.²

By area, Harris County is the 14th-largest county in the country.³ Harris County is overwhelmingly urban: almost 99% of households are in areas the Census defines as urban.⁴ The population is concentrated in about 76% of the County's land footprint. Houston is the largest city in the County, but there are more than 30 cities and census-designated places. Exhibit 1 lists cities and Census-designated areas, and Map 1 shows their location.

² U.S. Census Bureau, *Growth in the Nation's Largest Counties Rebounds in 2022* (Press release CB23-52, March 30, 2023), retrieved March 27, 2026, from <https://www.census.gov/newsroom/press-releases/2023/population-estimates-counties.html>

³ U.S. Census Bureau, *Profile: Harris County, Texas* (n.d.), retrieved March 27, 2026, from https://data.census.gov/profile/Harris_County,_Texas?g=050XX00US48201

⁴ For the 2020 Census, the Census Bureau changed how it defined *urban*, from a population-based designation to one reflecting a certain number of houses per census block. Even with the change, Houston's urban population grew about 0.01%.

3. Economic and Social Resources Available

Texas defines the Greatest Economic Need (GEN) as one resulting from an income level at or below the Federal Poverty Line.⁵ Currently in Texas, individuals with the Greatest Social Needs (GSN) include those who:

- Cannot always afford basic needs such as food or medicine
- Lack the skills or knowledge to prepare well-balanced meals or appropriately manage medicine
- Cannot access transportation to destinations such as medical appointments
- Live in a rural area
- Lack English language skills
- Have a disabling illness or physical condition.

Map 2: Percent of Age 55 and Older Living Below 150% of the Poverty Line

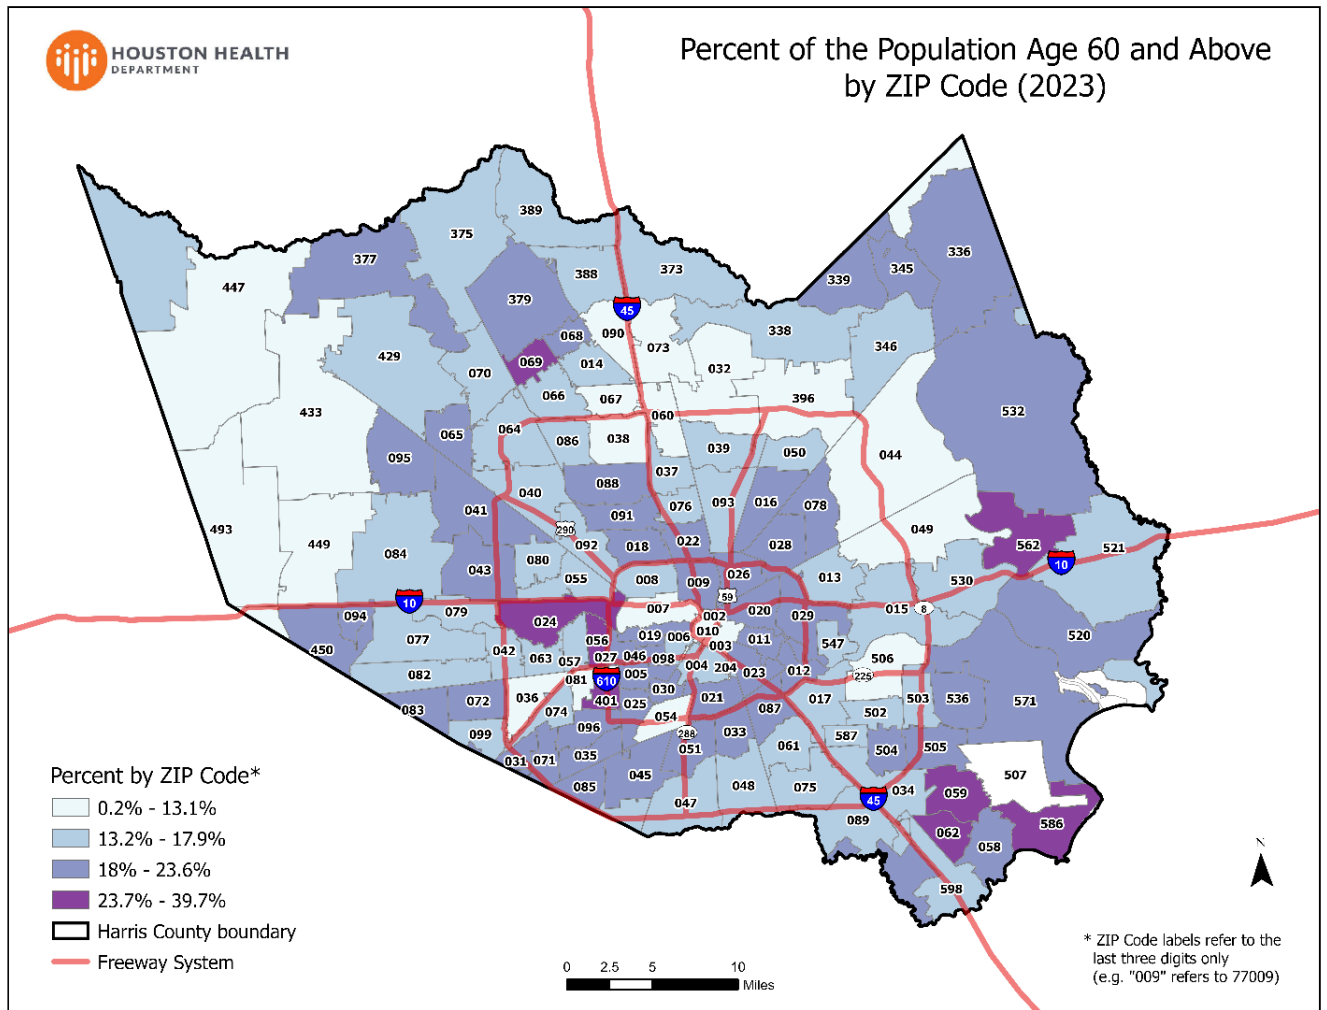

4. Population Trends and Other Issues Impacting Older Texans

Over the past two decades, Harris County’s population has continued to grow substantially. After rising from approximately 4.09 million in 2010 to 4.731 million in 2020, the county has reached an estimated **5.009 million** as of July 1, 2024—a 5.9% increase over the past four years.^{6 7}

⁶ U.S. Census Bureau, *QuickFacts: Harris County, Texas* (July 1, 2024), retrieved March 27, 2026, from <https://www.census.gov/quickfacts/fact/table/harriscountytexas/PST045224>

⁷ Houston State of Health Data Portal, *Demographics: County – Harris* (n.d.), retrieved March 27, 2026, from <https://www.houstonstateofhealth.com/demographicdata?id=2675§ionId=935>

Map 3: Percent by Zip Code

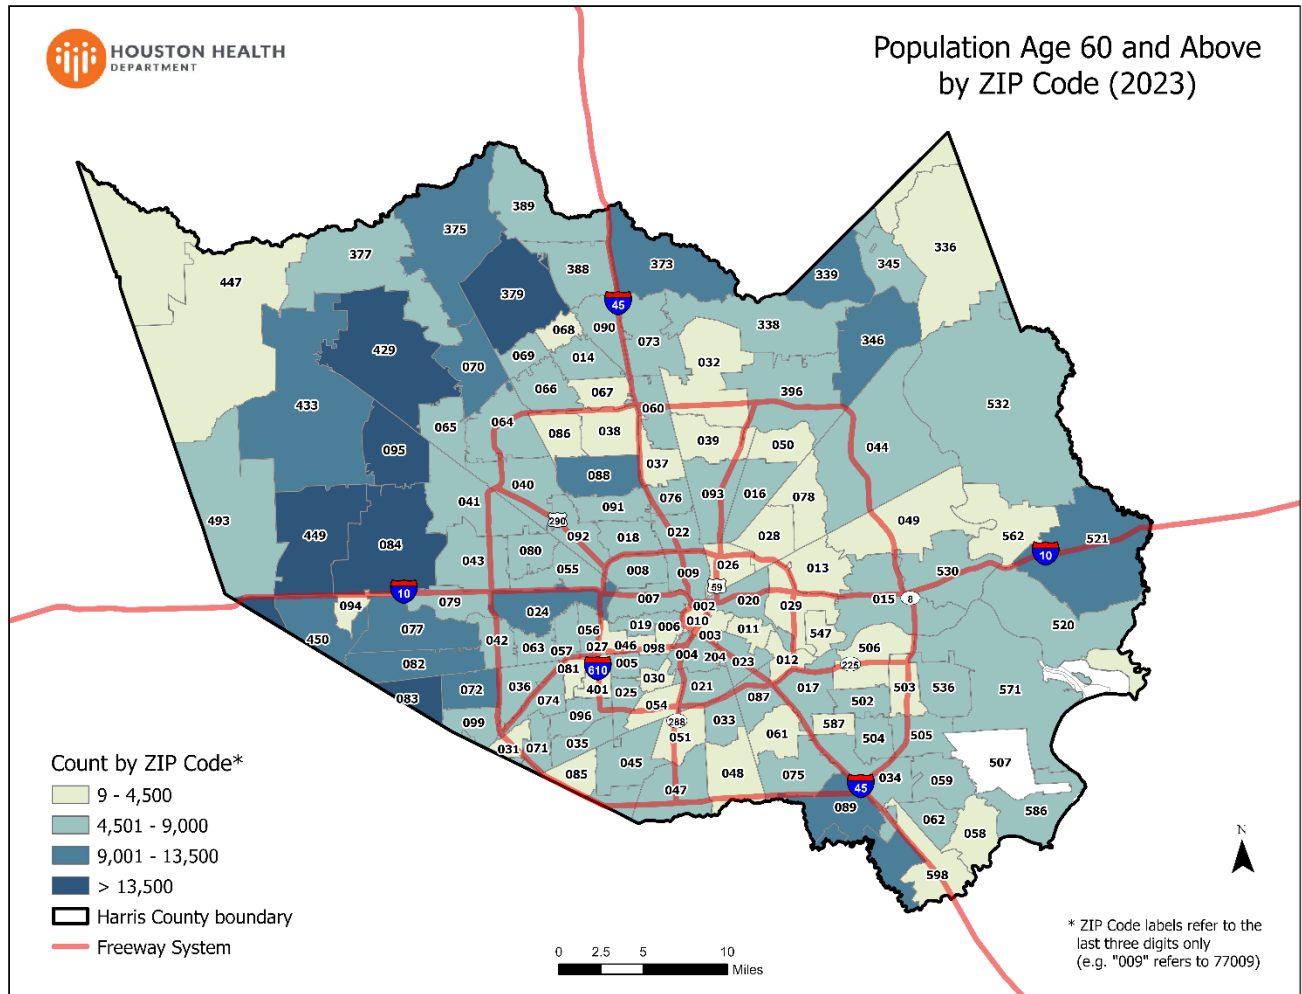

The demographic shift in the senior population remains especially pronounced. In 2020, **12.3%** of Harris County residents were aged 65 and older. That equates to roughly **581,000 older adults**, and this age group has continued to grow as the county’s median age hovers in the mid-30s^{8 9}.

⁸ U.S. Census Bureau, *QuickFacts: Harris County, Texas* (July 1, 2024), retrieved March 27, 2026, from <https://www.census.gov/quickfacts/fact/table/harriscountytexas/PST045224>

⁹ Houston State of Health Data Portal, *Demographics: County – Harris* (n.d.), retrieved March 27, 2026, from <https://www.houstonstateofhealth.com/demographicdata?id=2675§ionId=935>

Map 4: Count By Zip Code

Nationally, the older population grew by **38.6% between 2010 and 2020**—the largest single-decade increase since the 1880s—and reached 55.8 million, or **16.8%** of the U.S. population.^{10 11} Harris County outperformed national growth trends, with its 65+ cohort more than doubling since 2000.

Despite this robust long-term growth trajectory, the county experienced a noticeable slowdown in the latter half of the 2010s, driven by economic stagnation

¹⁰ U.S. Census Bureau, *Older Population and Aging* (Sept. 23, 2025), retrieved Mar. 27, 2026, from <https://www.census.gov/topics/population/older-aging.html>

¹¹ Zoe Caplan (statistician demographer, Census Bureau’s Sex and Age Statistics Branch), *“U.S. Older Population Grew From 2010 to 2020 at the Fastest Rate Since 1880 to 1890”* (April 24, 2024), *Aging Assistant*, retrieved March 27, 2026, from <https://www.agingassistant.com/u-s-older-population-grew-from-2010-to-2020-at-the-fastest-rate-since-1880-to-1890/>

and the aftermath of Hurricane Harvey. According to the Texas Census Institute, Harris County's 2020 Census count underrepresented its population by approximately **255,057** individuals, the largest numerical undercount of any Texas county. Within that figure, the population aged 65+ was undercounted by approximately 2.5% (13,000 seniors)¹².

Even with this undercount, Harris County's population of older adults remains among the largest in Texas—larger than the total population of the state's sixth-largest city—underscoring the critical importance of robust planning and services tailored to aging residents.

Harris County is one of the most culturally and ethnically diverse counties in the nation. Census data show the following composition:

- **45.0%** Hispanic or Latino
- **20.9%** Black or African American
- **8.0%** Asian
- **26.0%** Non-Hispanic White ¹³

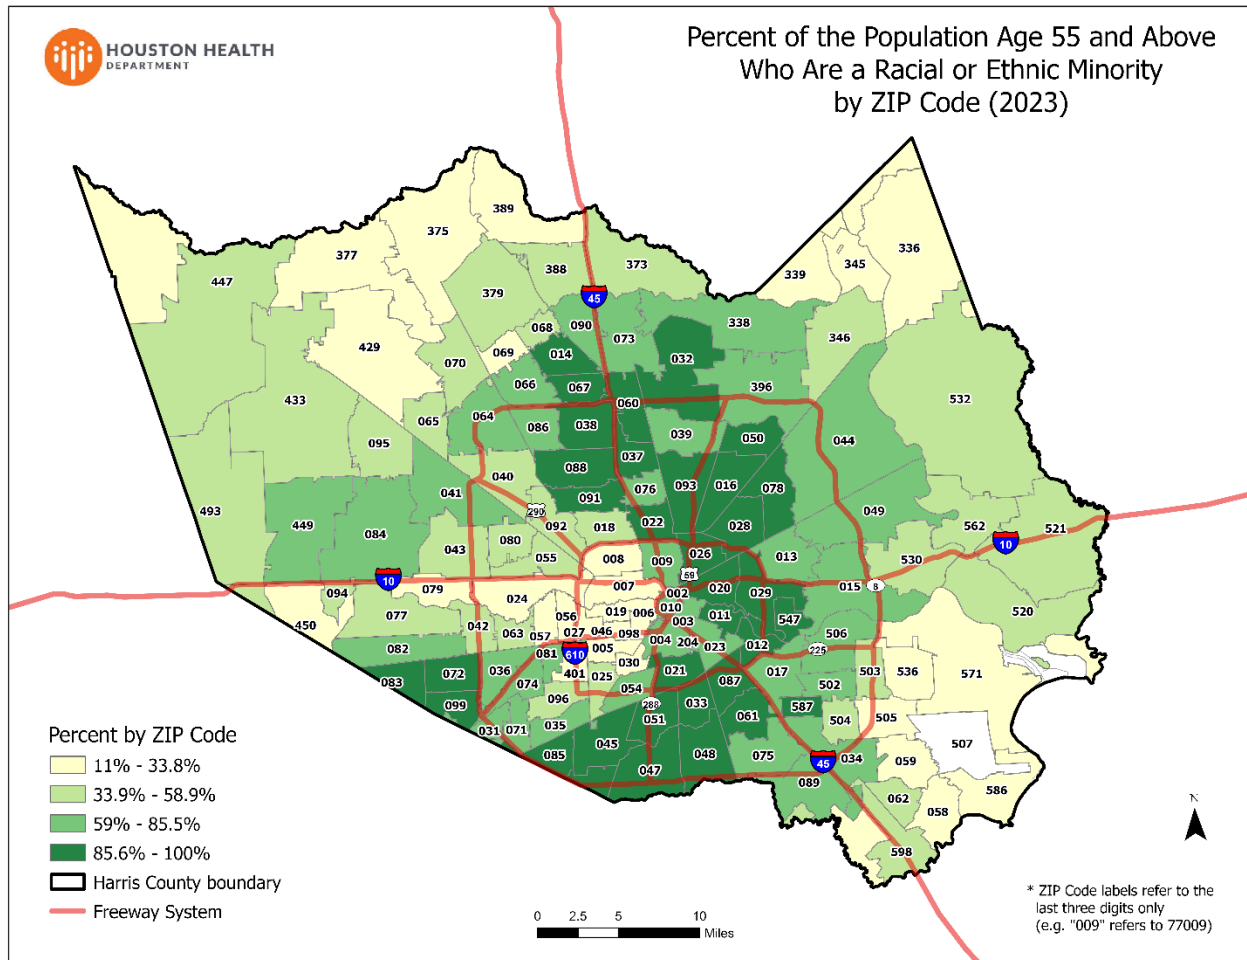

Local studies and rankings indicate that Harris County supports over 360 distinct ethnic groups, reinforcing its status as the most ethnically diverse county in Texas and among the top six most ethnically diverse in the U.S.¹⁴

¹² Dr. Francisco A. Castellanos-Sosa, *The 2020 Census Undercount in Texas Counties: Full Report* (research brief, Texas Census Institute, June 2024), retrieved March 27, 2026, from <https://texascensus.org/our-research/the-2020-census-undercount-in-texas-counties-full/>

¹³ U.S. Census Bureau, *QuickFacts: Harris County, Texas* (July 1, 2024), retrieved March 27, 2026, from <https://www.census.gov/quickfacts/fact/table/harriscountytexas/PST045224>

¹⁴ Amelia Winger and Nami Sumida, "Harris County Is Most Ethnically Diverse County in Texas, Data Shows" (updated Nov. 2, 2023), *Houston Chronicle*, retrieved Mar. 27, 2026, from <https://www.houstonchronicle.com/projects/2023/houston-population-ethnicity/>

Map 5: Percent of Racial or Ethnic Minority

This vast diversity presents both opportunities for culturally responsive programming and challenges for removing language barriers and ensuring access.

These data underscore Harris County's ongoing demographic transformation—marked by sustained overall growth, an expanding senior population, and deep cultural diversity. Despite census undercounts, the scale of the older adult demographic demands a comprehensive and inclusive service framework in the Area Plan.

5. Advisory Council Composition

The council will consist of individuals whose interests align with the goals and objectives of the Harris County Area Agency on Aging. The council's membership will adhere to all applicable federal and state laws, guidelines, and regulations. More than 50 percent of the members must be older adults, specifically those aged

60 and over, who are participants or eligible participants in a program under the Older Americans Act.

The membership of HCAAA APAC shall consist of:

- A. Older adults who reflect the geographic, ethnic, and socioeconomic diversity of the local population.
- B. Representatives of older adults, including the Texas Silver-Haired Legislators from Harris County.
- C. Locally elected officials.
- D. Independent School Districts (ISD) and colleges.
- E. Veterans Administration.
- F. Chapters of state-chartered senior organizations operating in Harris County.

The Council's membership will reflect the diverse population and demographics of the service area, including but not limited to its ethnic, cultural, geographic, and economic characteristics. Council members are selected through appointments, volunteer efforts, and nominations in accordance with the APAC Bylaws.

Table 1. Advisory Council Members by Category

Category	Number of Members
Older Individuals Residing in Rural Areas	0
Clients of Title III Services	2
Older Individuals	
Local Elected Officials	1
General Public	12
Veterans’ Health Care Providers, if applicable	1
Service Providers	14
Business Community Representatives	6
Representatives of Older Individuals	16
Representatives of Health Care Provider Organizations	2
People with Leadership Experience in the Private and Voluntary Sector	31
Representatives of Supportive Services Provider Organizations	10

Frequency of Meetings

APAC meets at least six times a year.

Member Selection Schedule

Appointees shall serve as members of APAC until reappointed, replaced, or notified that the membership is terminated.

Failure to comply with the minimum attendance requirements may, upon a majority vote of the Steering Committee, result in forfeiture of membership.

Should a vacancy occur for any reason, the appointing official shall be notified and asked to name a replacement.

Subject to approval of APAC, the total number of members may be increased, provided that the ratio of fifty (50%) percent of persons sixty (60) years of age or older is maintained. The number of appointments can be increased only if at least two-thirds of those present and voting concur.

Stewardship & Oversight

Harris County Area Agency on Aging (HCAAA) maintains an all-inclusive stewardship and oversight framework to ensure that all activities, funds, and services align with the principles and requirements of the Older Americans Act (OAA) of 1965, as amended in 2020, and the 45 CFR 1321.59. In addition, Federal and State mandates are guided by program management and administrative practices within the City of Houston (COH), by established policies and procedures maintained by program management and administrative practices within the City of Houston (COH), and by established policies and procedures maintained on the I-passport server. HCAAA policies and procedures encompass the following categories:

- **Operational Oversight**
- **Communication and Community Engagement**
- **Training & Capacity Building**
- **Fiscal and Contract Management**
- **Data Management and Reporting**

Operational Oversight:

The HCAAA implements policies and procedures to oversee program eligibility, service delivery, monitoring of subrecipients and contractors, and quality assurance. These procedures are reviewed periodically to ensure alignment with OAA's mission to support older adults in maintaining independence, dignity, and quality of life by planning, coordinating, and advocating for a comprehensive system of services and supports. Internal monthly and semiannual reviews, along with annual programmatic monitoring systems, are utilized to track compliance with service standards and contractual obligations.

Communication and Community Engagement:

The AAA maintains transparent communication channels with stakeholders, including older adults, caregivers, service providers, community partners, and governing entities. Public input and the Harris County Area Planning Advisory Council (APAC) guide the Harris County Area Agency on Aging to help ensure that targeted activities reflect OAA priorities and community needs. APAC meetings are held monthly in person with a virtual attendance option to broaden participation. The council enables HCAAA to expand community input, strengthen partnerships, identify emerging needs of the target population, and improve service planning accountability.

Training and Capacity Building:

HCAAA staff and contracted providers receive regular training on OAA requirements, service standards, fiscal management, and participant rights to ensure consistent and compliant program administration. COH mandatory training courses are also offered to staff, such as annual cybersecurity courses that include certificates of completion. Staff and providers receive training in data entry, reporting requirements, and Health Insurance Portability and Accountability Act (HIPAA) privacy standards.

Staff are also encouraged to participate in professional development opportunities, including the Aging in Texas Conferences, Medicare Improvements for Patients and Providers Conference, Information and Referral Certification, the National Aging Conferences, and other relevant conferences and workshops that strengthen program support.

Continuing education units are offered at the Annual Caregiver and Bridges Conferences, helping staff maintain current knowledge, support effective program implementation, and reinforce accountability as programs evolve.

Fiscal and Contract Management:

Fiscal management includes adhering to internal controls in procurement and contracting, exercising routine fiscal management and monitoring, and ensuring that expenditures of OAA federal, state, and local funds are allocable, allowable, and reasonable. Harris County AAA conducts monthly budget reviews and reconciliations, and annual fiscal risk assessments of its service providers. Subrecipients and service providers receive clear fiscal guidance throughout the current grant fiscal year. Formalized training is provided throughout the year: at the annual contractor's meeting, subrecipient mid-year reviews, and at the annual fiscal monitoring. At the annual contractor meeting and throughout the fiscal year, contractors are advised of their designations (subrecipient and/or contractor), documentation review processes, monthly invoicing processes, and annual monitoring and corrective action processes, as needed. All fiscal practices comply with applicable federal grant requirements, the 2 CFR, OAA cost principles, and City of Houston grants management policies and procedures.

The HCAAA conducts fiscal oversight of all federal, state, and local funds. Fiscal oversight practices include, but are not limited to:

- Adhering to the COH segregation of duties for procurement, approving payments, and expense reconciliation to reduce financial risk and ensure strong internal controls.
- Following established procurement policies which ensure competitive bidding, conflict-of-interest reviews, and compliance with federal grant and City of Houston procurement standards.
- Conducting annual vendor and service provider risk assessments to determine monitoring frequency and identify needs for technical assistance or corrective actions at the beginning of the City of Houston fiscal year.
- Performing regular internal budget reviews to compare expenditures against approved budgets and identify variances.
- Requiring providers to submit supporting documentation with their monthly invoices to the centralized accounts payable inbox, which is verified for accuracy, allowability, and alignment with OAA cost principles by the program manager and staff, Management Analyst IV for fiscal approval, and Programs Division Manager approval.
- Maintaining clear written and verbal guidance for allowable costs, meeting matching requirements designated by funding source (if applicable), and adhering to program income guidelines and documentation standards, distributed to all service providers.
- Utilizing the official City of Houston financial management system SAP for grants management, procurement processes, accounts payable, accounts receivable and payroll processing. Harris County AAA also utilizes internal grant-tracking mechanisms, such as Excel schedules that track OAA funding by service category, funding source, match requirements, program income, and monthly invoicing by service and provider.
- Requiring monthly vendor invoice audits, conducting midyear fiscal and programmatic review meetings, and annual monitoring of subrecipients, including desk reviews or onsite assessments.
- Participating in external single audits, responding to subrecipient audit information requests, and promptly implementing corrective action plans to maintain compliance with federal and state regulations.

Data Integrity, Reporting and Oversight of Targeted Services:

The HCAAA exercises oversight of client-level and programmatic data through established data management protocols, ensuring accuracy, completeness, and confidentiality utilizing the official data system, Peer Place.

Data is routinely analyzed to monitor service utilization, identify inconsistencies, and support decision-making aligned with OAA goals and in accordance with Houston Health and Human Services Commission contract requirements. HCAAA also complies with required reporting, such as:

- Quarterly Performance Report
- Planning, Working, and Closeout Budgets
- State Performance Report (SPR)
- State Health Insurance Program (SHIP) and Medicare Improvement for Patients and Providers Act (MIPPA) Annual Reports

Implementation of priority programs—such as services addressing vulnerable populations, caregiver support, nutrition and food insecurity, and health promotion—is guided by documented procedures and measured through key performance indicators at both the State and Local levels. Projected budgets, units, and people served are documented through the Planning, Working, and Closeout Budgets. Actual monthly expenditures and programmatic performance are captured in the Quarterly Performance Report (QPR) to assess the impact on the target population.

The HCAAA conducts periodic assessments to ensure targeted activities remain consistent with the OAA’s mission to promote autonomy, prevent abuse, and support aging in place, within Harris County. These oversight mechanisms help to ensure that all funds are expended responsibly and support the OAA’s goal of delivering effective, high-quality services to older adults.

Key Topic Areas

Core Program Area 1: Supportive Services

Access and Engagement

- Information, Referral, and Assistance (I&R/A): Trained specialists provide intake, needs identification, options counseling, and referrals to public/private services.
- Outreach, Public Education, and Legal Awareness: Targeted engagement identifies isolated or underserved older adults and educates them about available services, rights, benefits, legal options, and protective programs.
- Benefits Counseling (SHIP/MIPPA): Certified Texas Department of Insurance counselors provide one-on-one assistance with Medicare, Medicaid, Social Security, and related consumer/coverage issues for Harris County residents 60+ and, under specific funding, all Medicare beneficiaries, helping older adults and caregivers optimize benefits.

Care Coordination and Case Management

- Care Coordination: Comprehensive assessment and individualized service planning address complex needs (e.g., multiple chronic conditions, mobility limitations), ensuring appropriate referrals and warm hand-offs to community-based services and long-term services and supports (LTSS)
- Case Management: Ongoing monitoring and person-centered plan adjustments connect participants to long-term supports. **In-Home and**

Community Support Services

- Transportation: Accessible transportation to medical appointments, nutrition sites, and pharmacies, mitigates isolation and supports health maintenance.
- Home-Based Supports: Personal assistance, social reassurance, and minor repairs/modifications enhance safety and independence at home.
- Respite Services (Short-Term Relief): Planned relief for caregivers is coordinated through HCAAA's programs and the HHSC Respite Provider Directory to broaden options (in-home, adult day, short-term out-of-home), authorized through individualized care plans.

Legal Assistance and Advocacy

Legal assistance will prioritize access to benefits, health/long-term care, housing, consumer protections, utilities, and safeguarding against abuse, neglect, exploitation, and discrimination. Services align with the Administration of Community Living 2024 expectations for elder rights (including support for alternatives to guardianship) and coordinate with the Long-Term Care Ombudsman Program for facility residents.

Caregiver Support

Local Delivery and Access

- HCAAA Caregiver Support Network: HCAAA provides information/education, access assistance, counseling/support groups/training, respite, and supplemental services; caregivers connect via 832-393-4301 and HCAAA's caregiver conferences and outreach.
- Coordination with ADRC: The Care Connection ADRC streamlines caregiver access to LTSS, respite resources, training, and benefits, ensuring no-wrong-door navigation and warm transfers.
- Benefits Counseling: SHIP/MIPPA counselors assist caregivers with Medicare/Medicaid and related entitlements, reducing coverage/financial barriers that destabilize caregiving arrangements.

Target Population and Prioritization

Supportive Services and caregiver supports target individuals aged 60+ (and eligible caregivers) with emphasis on: greatest economic and social need; low-income minority elders; limited English Proficiency (LEP) communities; underserved groups; and those at risk of institutionalization.

Service Delivery Model & Coordination

HCAAA operates as the lead agency on aging issues in Harris County, delivering a person-centered, trauma-informed model and coordinating a community-based system through advocacy, planning, contracting, inter-agency collaboration, information-sharing, monitoring, and evaluation—aligned with ACL's 2024 rule and HHSC's AAA framework.

Integration with the Care Connection ADRC strengthens "no wrong door" access to LTSS and simplifies navigation for older adults and caregivers.

Equity, Language Access, and Outreach

HCAAA will implement targeted outreach and culturally responsive engagement to reach low-income, minority, limited-English-proficiency, and socially isolated populations. Materials and services will be provided in multiple languages, with interpreter services available.

Quality Assurance, Compliance, and Performance Monitoring

HCAAA maintains compliance with HHSC policies and procedures (e.g., subrecipient monitoring, records management, complaint resolution) and ACL reporting requirements, including submission of data for the State Program Report (SPR) through the HHSC information management system.

HCAAA will incorporate ACL's 2024 Final Rule requirements—including strengthened prioritization, conflicts-of-interest safeguards, emergency preparedness, and clarified legal assistance expectations—into internal policies, provider contracts, and staff training.

Emergency Preparedness and Continuity

HCAAA will embed emergency and disaster requirements in accordance with 45 CFR Part 1321 and HHSC emergency planning guidance by supporting older adults and their caregivers in registering for the State of Texas Assistance Emergency Registry (STEAR).

Core Program Area 2: Nutrition Services – Congregate Meals, Grab & Go Meals, and Home Delivered Meals

Congregate Meals

Pre-plated hot meals that meet the state-required 1/3 of the recommended dietary intake are delivered to 36 congregate meal sites by the food service provider/commissary of choice. Eight sub-recipients manage the congregate meal sites, all of which are located within Harris County.

MAP 6: Senior Congregate Meal Sites

The meal sites are managed and operated by eight aging network partner agencies, comprised of four non-profit agencies and four municipalities. The congregate meal sites are in a variety of facilities, including City of Houston Multi-Service Centers (12), community centers (14), senior centers (9), and a church (1). In addition to daily meal service, the congregate meal sites offer a wide range of other programs and services provided through the HCAAA, Houston Health Department, and aging network partners, including but not limited to health screenings, evidence-based interventions and disease self-management classes, access to the food pantry and supplemental food assistance, recreation and fitness classes and field trips and other socialization activities.

Shelf-stable meals are available during inclement weather when meals cannot be delivered to nutrition consumers. Nutrition Education is provided annually to each participant through a 15-minute presentation that allows active participation. Classes include providing information that promotes positive nutritional well-being. The sessions are developed by a qualified dietitian and intended to educate consumers on healthy eating habits and cost-effective ways that support a healthy lifestyle. Eligibility for congregate meals is open to individuals aged 60 and older and eligible spouses, regardless of income. In accordance with OAA requirements, priority is given to older individuals in Greatest Economic Need (GEN) and Greatest Social Need (GSN), those with limited English proficiency, and individuals residing in high-poverty or underserved areas.

Some older individuals may have difficulty accessing transportation to the congregate meal sites. Others may have trouble accessing appropriate healthcare services; thus, many of our centers act as Focal Points to assist with services and/or referrals. Efforts are put in place to address unmet needs related to chronic conditions, mental health support, medication management, and preventive care. Many older adults also face social isolation due to factors such as retirement, the loss of loved ones, limited mobility, or living alone. Social isolation can lead to loneliness, depression, and a lack of social support. Technological advancements have created a digital divide, leaving some older adults with limited access to or understanding of digital technologies. Lack of technical access or understanding can hinder their ability to access online information, healthcare services, social connections, and other resources, leading to unmet needs in the digital realm.

Home Delivered Meals

The HCAAA provides contracted home-delivered meals throughout Harris County with assistance from eight aging network partner agencies, four nonprofit agencies, and four municipalities. Pre-plated hot meals are prepared and delivered by the food service provider to the distribution sites of the eight sub-recipients for home-delivered meals. Volunteers and service provider staff then deliver meals to eligible older individuals in Harris County.

. To be eligible for the home-delivered meal program, an older adult must be homebound or bedbound and meet the required assessment criteria related to activities of daily living.

. As with the congregate meal program, hot meals are cooked locally in the food service commissary and delivered daily to the home-delivered meal partners. Meals are delivered by paid staff or volunteers Monday through Friday, with frozen meals authorized on only a temporary or exception basis should a consumer be receiving dialysis, chemotherapy, physical therapy, or other medical activities that would

require them to be away from the home during the day. During delivery, staff and volunteers conduct informal wellness checks on the consumers. These consumers are also referred to our other services, including In-home Services, emergency response services, incontinence supplies, or other support services. Nutrition Education is provided annually to each participant, either in the home or virtually, as a 15-minute presentation that allows active participation. Classes include providing information that promotes positive nutritional well-being. The sessions are developed by a qualified dietitian and intended to educate consumers on healthy eating habits and cost-effective ways that support a healthy lifestyle.

Nutrition Education - In compliance with OAA and HHSC requirements, Nutrition Education is provided annually to each congregate participant, either in the home or virtually, as a 15-minute presentation that allows active participation. Classes include providing information that promotes positive nutritional well-being. The sessions are developed by a qualified dietitian and intended to educate consumers on healthy eating habits and cost-effective ways that support a healthy lifestyle. Documentation of participation is maintained in accordance with reporting requirements.

Demand Response

The HCAAA provides demand response transportation to support congregate meal services for older individuals aged 60 and older within Harris County. This program is specifically for eligible older individuals who require transportation to and from a congregate meal site. The older individuals will notify their site director and, if they reside within a 3.5-mile radius, will be enrolled in the program. The provider then contracts with a transportation company to provide transportation on a fixed-rate basis for older individuals who reside within a 3.5-mile radius of a congregate site. The network partner is responsible for picking up the consumer at their place of residence, transporting them to the congregate meal site, and returning them to their residence. Transportation services are provided Monday through Friday, usually between 9:30 am and 1:30 pm. This program provides a consumer-driven transportation system with options that encourage ridership, support and protect consumers, provide greater scheduling flexibility, reduce isolation, and allow older adults to remain independent and safe.

Grab & Go Meals

Beginning in fiscal year 2027, HCAAA will pilot Grab & Go meals as a supplemental component. This service will enhance, not diminish, the traditional congregate program by increasing access for older adults who face temporary or ongoing

barriers to on-site participation, while preserving regular congregate dining schedules, staffing, and programming.

Meals will meet the State-required one-third (1/3) of the Dietary Reference Intake (DRI) and will be pre-packaged for safe distribution at approved congregate sites during designated timeframes that do not replace standard meal service. HCAAA will monitor monthly participation data, funding utilization, and attendance trends to ensure congregate participation remains stable and that Grab & Go services function as an access expansion strategy rather than a substitute model.

Core Program Area 3: Evidence-Based Disease Prevention & Health Promotion Services

HCAAA encourages seniors to develop and maintain healthy lifestyles to live better and fuller lives.

The purpose of the program is to:

- Reduce the prevalence and impact of chronic disease among older adults
- Improve self-management skills and health literacy
- Decrease preventable hospitalizations and emergency department utilization
- Support aging in place through improved physical and behavioral health outcomes
- Advance health equity across Harris County.

HCAAA provides EBI programs approved by the National Council on Aging.

HCAAA contracts with qualified community-based providers to deliver structured, evidence-based interventions that meet the highest-level evidence criteria as defined by the Administration for Community Living (ACL). Programs implemented under this Core Program Area must demonstrate measurable improvements in participant outcomes and fidelity to nationally recognized models.

Services typically include:

- **Chronic Disease Management Program (CDMP)** - Group-based workshops that equip participants with practical skills to manage chronic conditions, including medication adherence, symptom monitoring, goal setting, and effective communication with healthcare providers.
- **Diabetes Self-Management Education (DSME)** - Group-based workshops that equip participants with practical skills to manage the conditions, including medication adherence, symptom monitoring, goal setting, and proper nutrition

- **Chronic Pain Self-Management** – Group-based structured interventions addressing pain management strategies, physical activity planning, and risk factor reduction.
- **Falls Prevention Programs**
 - Evidence-based balance and strength training curricula designed to reduce fall risk and increase confidence in mobility. Programs such as:
 - Matter of Balance
 - Tai-Chi
 - Texercise
 - Bingocize
 - Arthritis Foundation Exercise Program
 - Arthritis Foundation Aquatics Program

 - The PEARLS Program (Program to Encourage Active, Rewarding Lives)
 - Healthy IDEAS (Identifying Depression and Empowering Activities for Seniors)
 - Powerful Tools for Caregivers

Target Population and Equity Focus

Consistent with OAA requirements and HHSC priorities, HCAAA prioritizes service delivery to:

- Older adults with multiple chronic conditions.
- Individuals with disabilities.
- Low-income older adults.
- Individuals residing in rural or medically underserved areas.
- Individuals with limited English proficiency.

Core Program Area 4: Family Caregiver Support Services – includes efforts to enhance services and supports for caregivers.

Caregiver Support Services

Program Overview

Caregiver Support Services strengthens the ability of informal caregivers to sustain care for older adults age 60 and over, promoting short-term in-home support, safety, and aging in place. Through structured respite and supportive interventions, HCAAA reduces caregiver burden, delays institutional placement, and enhances quality of life for both caregivers and care recipients.

Services are delivered through HCAAA's Access and Assistance Program using a person-centered approach. Staff assess the needs of the caregiver and care recipient to identify unmet needs defined by the consumer. Following assessment, a care plan is developed, referrals are made to community partners or HCAAA contractors, and service authorizations are issued when needs fall within HCAAA's scope of services.

HCAAA monitors service initiation to ensure services begin within 14 business days, conducts 30-day monitoring to confirm continued appropriateness, and completes 60-90-day reassessments to determine eligibility for long-term care services through HHSC or other state agencies and to identify natural supports for sustained stability.

Services are provided through an established vendor pool procured via a formal contracting process to ensure accountability, compliance, and geographic access across Harris County.

In accordance with the Older Americans Act, HCAAA prioritizes services for caregivers with the greatest economic and social need, caregivers of individuals with severe disabilities, including dementia, and grandparents or older relatives age 55 and older raising minor children.

Core Services

- **In-Home Respite Care:** Temporary relief provided in the residence for dependent older adults requiring supervision.
- **Out-of-Home Respite (Adult Day Care):** Supervised congregate care offering structured daytime support.
- **Personal Assistance:** In-home assistance for older adults with difficulty performing at least two activities of daily living.
- **Emergency Response Services:** Automatic monitoring systems linking homebound, frail older adults to emergency services (authorized for up to one year).
- **Social Reassurance:** Regular contact through phone or virtual communication, with follow-up protocols if a consumer cannot be reached.

Target Population & Equity Focus

Over the next three years, HCAAA anticipates increased demand due to continued growth in the population aged 60 and older in Harris County. While

services are not income-based, the program primarily supports older adults and caregivers who may not qualify for Medicaid or other entitlement programs but still experience significant functional, caregiving, or access-related needs.

Priority populations include:

- Older adults and caregivers who may be frail, homebound, not eligible for income-based entitlement programs, but require supportive services to remain safe in their communities to prevent premature institutional placement.

HCAAA remains committed to equitable service delivery by ensuring access across geographic regions, cultural communities, and levels of functional need, while prioritizing individuals at risk of system fragmentation or avoidable institutional care.

Core Program Area 5: Legal Assistance

Program Description

Legal Assistance is a required core service under the Older Americans Act (OAA) that ensures adults age 60 and older have access to free legal services to protect their rights, independence, and economic security. The Harris County Area Agency on Aging (HCAAA) administers this program to address legal issues that may threaten an individual's ability to age safely and independently in the community.

Purpose and Goals

The purpose of the Legal Assistance program is to prevent, detect, and resolve legal problems that negatively impact older adults' health, safety, housing stability, and access to benefits. The program supports the HCAAA's mission to promote independence, dignity, and quality of life for older adults, particularly those with the greatest economic and social need.

Services Provided

The HCAAA contracts with qualified legal service providers experienced in elder law to deliver Legal Assistance services at no cost to eligible individuals. Services include legal advice, counseling, document preparation, and limited representation, as allowable under the OAA.

Legal Assistance services may include, but are not limited to:

- Assistance with public benefits, including Social Security, SSI, Medicare, Medicaid, SNAP, and other income and health care benefits
- Housing-related legal issues such as evictions, foreclosures, property tax disputes, and tenant rights
- Health care access and consumer rights, including Medicare appeals, and long-term care rights,

Service Delivery

Legal Assistance services are provided through multiple access points, including telephone consultations, in-person appointments, community legal clinics, and outreach events.

Target Population and Priority

In accordance with OAA and HHSC requirements, priority is given to older adults with the greatest economic and social need, with particular emphasis on low-income individuals, individuals with limited English proficiency (LEP), and older adults with disabilities. Some services may be limited due to cost and budget constraints.

Core Program Area 6: Ombudsman Services

The Ombudsman program protects the rights of residents (in Harris County residing in assisted living or nursing home facilities). It promotes the well-being of long-term care residents through advocacy and assistance in navigating the complexity of long-term care. HCAAA contracts with a university to manage the ombudsman program.

Long-term care (LTC) ombudsmen are advocates for residents' rights. They protect the quality of life and quality of care of anybody who lives in a nursing facility or assisted living facility. Ombudsmen can be volunteers or paid staff of agencies who are independent of any long-term care facility. Services are free, confidential, and available statewide.

The Harris County LTC Ombudsman Program is one of only three in the State of Texas, out of 28, that is contracted out by the Area Agency on Aging (AAA) and is made possible through a collaboration with the Office of the State LTC Ombudsman, the Harris County AAA, and the Cizik School of Nursing at UTHealth Houston. The county is home to the City of Houston, the most populous city in the state and the fourth most populous city in the United States, helping the county to rank as the

most populous in Texas and the third most populous in the United States. Fitting for such a large county, as of March 2026, the Harris County LTC Ombudsman Program's coverage area includes 11,013 licensed assisted living beds in 271 different facilities and 11,268 nursing home beds in 94 different facilities.

With an estimated 18,000-20,000 residents living in a long-term care facility in Harris County, the ombudsman program only has a staff of eight, which includes a Managing Local Ombudsman, a Volunteer Coordinator, and six Staff Ombudsmen. Hence, volunteers are essential to having a more visible ombudsman presence in the facilities. Harris County currently has 52 certified volunteer ombudsmen who make regular visits to assigned facilities, along with an additional 35 volunteers in training. More volunteers are always needed.

Staffing levels are strongly correlated with the quality of care in LTC facilities, and the State of Texas ranks 51st out of 53 (Puerto Rico, Guam, and Washington, D.C. included) in staffing ratings according to the Centers for Medicare & Medicaid Services (CMS).¹⁵ In Harris County, 41% of nursing homes have a one-star staffing rating, another 30% have a two-star rating, and only 29% have a three-star rating or higher.¹⁶ These low staffing rankings emphasize the need for ombudsmen's presence in facilities, as their extra eyes and ears play a vital role in safeguarding residents' dignity and well-being and, in many cases, serve as the residents' voice.

In this last year alone, the Harris County LTC Ombudsman Program made 2,941 visits to 364 different facilities. Volunteers and staff investigated 968 cases on behalf of residents and provided 3,235 instances of information and assistance to individuals. Certified volunteer ombudsmen donated over 2,600 hours to the program. Despite operating with a limited staff, the Harris County program annually increases its presence in facilities by having the most volunteers of any other program in the state. Despite recent cuts to federal funding, the Harris County AAA continues its commitment to the ombudsman program and to all those whom it serves.

2. Greatest Economic Need (GEN) identification (economic hardship):

¹⁵ Long Term Care Community Coalition. (2025). *Nursing home staffing Q1 2025*. NursingHome411. Retrieved March 31, 2026, from <https://nursinghome411.org/data/staffing/staffing-q1-2025/>

¹⁶ PlainProof. (2025, July). *Summary information for health care providers in Harris County, TX* [Data summary]. Retrieved March 31, 2026, from <https://www.plainproof.com/geo/texas/harris-county/index.html>

Income at or below the **Federal Poverty Level (FPL)** (verified or self-declared during intake).¹⁷

Secondary indicators of economic strain (e.g., inability to afford essentials, utility shut-off risks, and medication cost barriers).

3. Greatest Social Need (GSN) identification (non-economic barriers):

- **Functional impairment** (frailty or difficulty with ≥ 2 ADLs/IADLs), **disability**, or cognitive limitations documented in the **Consumer Needs Evaluation (CNE)**.
- **Limited English proficiency** and need for interpretation/translation.
- **Cultural/social isolation** (e.g., living alone with limited contact), **geographic isolation** (distance, lack of transit), or other barriers noted in assessment.¹⁸

HCAAA will document **targeting outcomes** in the Area Plan and quarterly reporting, consistent with HHSC requirements to consider GEN/GSN in objectives, strategies, and service delivery.

4. Describe collaborative efforts with Home-and Community-Based Services (HCBS)

The Area Agency on Aging (AAA) actively collaborates with Home and Community Based Services (HCBS) providers throughout its Planning and Service Area (PSA) to ensure coordinated, person-centered support for older adults and individuals with disabilities. These collaborative efforts are designed to enhance service accessibility, improve continuity of care, and promote independent living in community settings.

The AAA maintains formal partnerships and provider agreements with HCBS agencies to deliver essential services, including personal care, respite care, adult day services, transportation, and home-delivered meals. Regular communication is

¹⁷ National Archives and Records Administration, Office of the Federal Register. (2026, March 24). Electronic Code of Federal Regulations: 45 C.F.R. Part 1321—Grants to State and Community Programs on Aging. <https://www.ecfr.gov/current/title-45/subtitle-B/chapter-XIII/subchapter-C/part-1321>

¹⁸ Grants to State and Community Programs on Aging, 45 C.F.R. pt. 1321 (2026). Retrieved March 27, 2026, from <https://www.ecfr.gov/current/title-45/subtitle-B/chapter-XIII/subchapter-C/part-1321>

facilitated through interagency meetings, case-staffing consultations, and shared care planning processes to ensure that clients receive comprehensive, non-duplicative services.

In addition, the AAA works closely with HCBS partners to streamline referral processes, conduct joint outreach initiatives, and address service gaps within the PSA. Collaborative training sessions and technical assistance opportunities are provided to strengthen service quality, ensure regulatory compliance, and promote best practices in person-centered care.

The AAA also participates in cross-system coordination with healthcare providers, social service agencies, and community-based organizations to support care transitions, reduce institutionalization, and respond effectively to emerging community needs. Data-sharing agreements, quality-assurance monitoring, and performance evaluations further support accountability and continuous improvement across the HCBS network.

Through these coordinated efforts, the AAA fosters a comprehensive and integrated service delivery system that empowers individuals to remain safe and independent in their homes and communities.

5. Practices/strategies to serve older adults with physical and mental health conditions.

Integrated Physical Health Supports

- Home- and Community-Based Services (HCBS): Provide in-home personal and skilled care (e.g., bathing, medication, therapy) and deliver durable medical equipment, home modifications, and safety assessments to help older adults remain independent and age in place.

Mental Health & Emotional Well-Being

The Harris County Area Agency on Aging supports the mental and emotional well-being of older adults as part of its overall care approach. HCAAA Information, Referral, and Assistance staff are trained to recognize signs of stress when interacting with older adults and to provide timely referrals to mental health services. The Agency also partners with Adult Protective Services and the Harris Center to ensure coordinated support for individuals who may be vulnerable or at risk, helping to deliver timely and comprehensive care for older adults with physical and behavioral health needs.

These practices create a multi-faceted continuum of care—combining in-home medical services, preventive wellness, emotional support, and strong care coordination—to effectively meet the complex physical and mental health needs of older adults in Harris County.

Needs Assessment Activities

Needs Assessment Activities

To inform the development of the Harris County Area Agency on Aging (HCAAA) Area Plan, the agency conducted a comprehensive needs assessment using an adapted version of the *2025 State of Older New Yorkers Survey*, originally developed by the New York City Department for the Aging.¹⁹ HCAAA tailored the survey to reflect the unique characteristics and priorities of older adults in Harris County while maintaining the structure and rigor of the original instrument. The final survey consisted of 40 questions designed to gather insight into the needs, priorities, and experiences of older residents and their caregivers.

To ensure accessibility and broad community participation, the survey was made available both in hard copy and digitally through an easy-to-use QR code. Recognizing Harris County’s linguistic diversity, HCAAA translated the survey into Chinese, Spanish, Korean, and Vietnamese to ensure equitable access for non-English-speaking older adults.

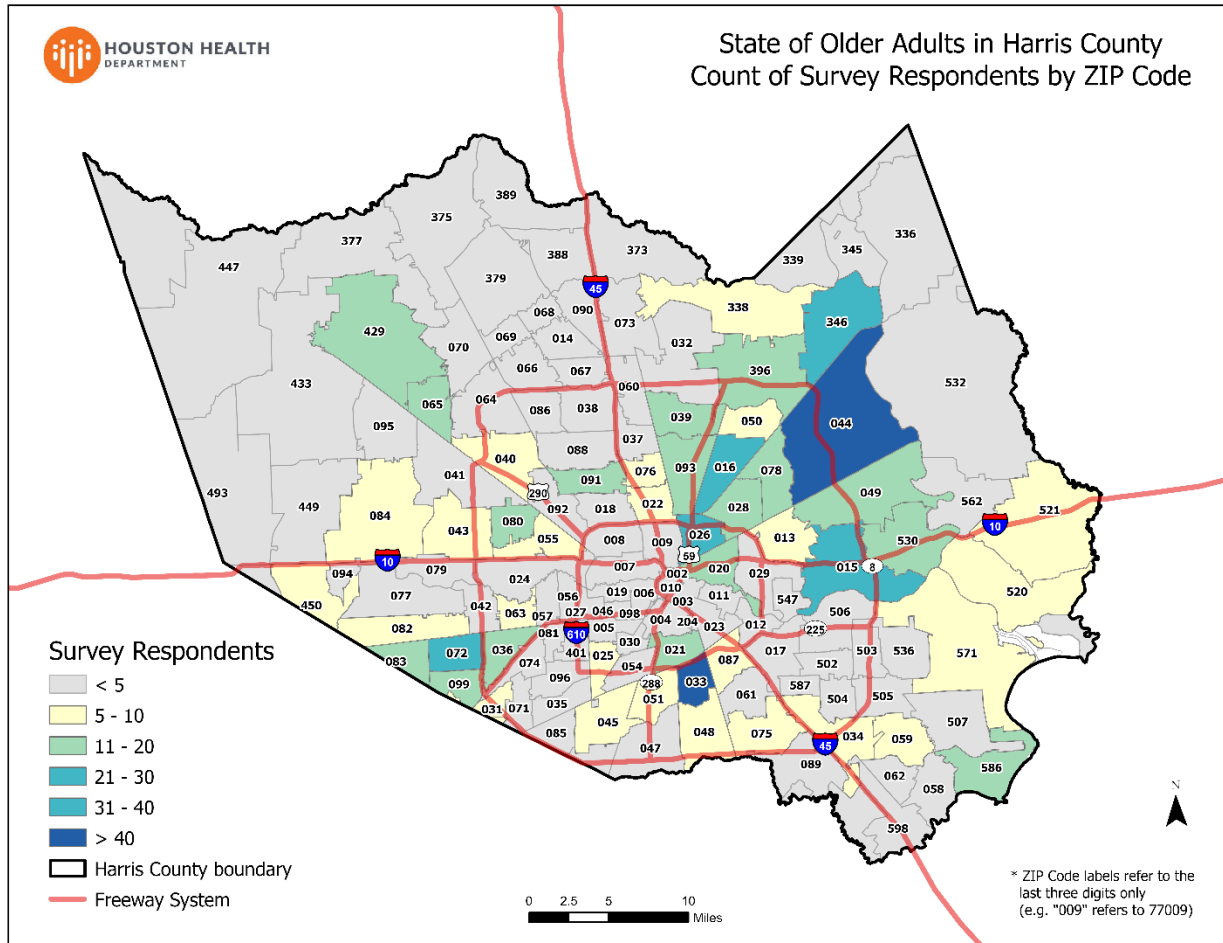

The survey dissemination period extended from early December 2025 through March 16, 2026, ultimately yielding 768 completed responses. HCAAA staff actively supported outreach by visiting various community locations across the county to introduce the survey and assist older adults in completing it. Congregate meal sites also distributed copies of the survey in all available languages to encourage participation among program participants.

In addition to in-person outreach, the survey was promoted across multiple digital platforms. Announcements were shared through the Houston Health Department’s social media channels, the Harris County Precinct social media accounts, and the personal social media pages of HCAAA Advisory Council members. This multifaceted

¹⁹ NYC Department for the Aging. (2025). *The State of Older New Yorkers: Building an age-inclusive future* [Report, Version 3]. <https://www.nyc.gov/assets/dfta/downloads/pdf/reports/the-state-of-older-new-yorkers-2025-v3.pdf> [1] (<https://www.nyc.gov/assets/dfta/downloads/pdf/reports/the-state-of-older-new-yorkers-2025-v3.pdf>)

outreach approach helped ensure that a broad and diverse cross-section of older adults in Harris County had the opportunity to share their perspectives.

Map 7: Survey Respondents by Zip Code.

The resulting data provides a meaningful foundation for understanding the needs of the county’s aging population and will directly inform priorities and strategies in the upcoming HCAA Area Plan.

FINDINGS

Respondent Demographics

A total of 768 surveys were completed, representing 120 Harris County ZIP codes; 28 respondents were under age 60. After weighting, the sample reflected the county’s older adult population, with respondents aged 65–74 comprising the largest group (42.1%), followed by ages 60–64 (28.4%), 75–84 (22.6%), and 85+ (6.9%). Gender distribution was balanced (50.3% male; 49.7% female). Hispanic

or Latino respondents represented the largest racial/ethnic group (44.3%), followed by White non-Hispanic (24.6%), Black or African American (19.7%), Asian (7.5%), and Other/Multiracial (3.9%).

Basic Needs

More than four in five respondents (81.1%) reported at least one unmet service need. The most frequently cited needs included home repair or maintenance (32.9%), technology assistance (29.5%), transportation (28.4%), home care or housekeeping (23.5%), and bill payment assistance (21.7%). These patterns highlight substantial challenges related to aging in place, financial stability, and mobility.

Caregiving Responsibilities

Nearly half of respondents (45.8%) reported currently serving as caregivers, with 26.8% assisting older family members. Caregiving was most common among adults aged 60–74, indicating that many individuals are simultaneously managing their own aging-related needs while supporting others. Although caregiving prevalence did not differ significantly by gender or race/ethnicity, its widespread nature suggests potential impacts on caregiver stress, service utilization, and health.

Health, Loneliness, and Safe Living

Among respondents, 14.4% lacked a regular healthcare provider. Only half (49.7%) reported consistent access to healthy food. Preventive care uptake varied: flu (63.1%), COVID-19 (48.2%), pneumonia (27.6%), RSV (12.9%), and shingles (28%) vaccinations; and lower-than-expected cancer (41.7%) and diabetes (44.5%) screening rates. Notably, 28.5% were non-compliant with both recommended screenings and vaccinations. Loneliness was common, with 34.1% reporting high loneliness and 18.5% reporting frequent loneliness. Sensory limitations were also prevalent: 11.3% reported hearing difficulty and 3.8% vision difficulty, with hearing impairment increasing sharply among adults 85+ (48.5%). Among those with serious hearing difficulty, only 13.3% used hearing aids.

Crime and Abuse

A meaningful share of respondents reported safety concerns. Specifically, 6.5% had been victims of crime, and 9.4% reported experiencing elder abuse. Additionally, 5.2% expressed concerns about financial exploitation and 5.2% about emotional or physical harm.

Digital Divide

Digital access and literacy emerged as significant barriers. Nearly 29.5% of

respondents reported needing technology assistance; 9.9% lacked internet access, and of those, 83% cited affordability as the primary reason. Slightly more than half owned (55.5%) or used (51.5%) a computer or tablet; among non-owners, 51.5% stated they could not afford one. These findings indicate that digital exclusion remains a major determinant of access to information, services, telehealth, and social connection.

Community Connection

While most respondents (75.1%) reported communicating with others as often as desired, 24.9% experienced gaps in social connection. Participation in senior centers was limited: 46.3% had visited a center in the past few months, compared with 53.7% who had not. Barriers to participation included fear of illness (5.6%), lack of familiarity with available services (4.1%), lack of interest (3.2%), and logistical constraints such as transportation and physical access. Despite these challenges, the potential for community engagement was high, with 29.5% reporting current volunteer activity and 42.9% expressing interest in volunteering.

Conclusion

Findings from the Harris County needs assessment reveal substantial caregiving and health-related challenges that carry important implications for public health and aging. High rates of caregiver responsibility, particularly among adults aged 60–74, indicate a growing segment of older residents who are navigating their own age-related needs while also caring for others. Combined with notable gaps in preventive care, loneliness, access to healthy foods, and sensory impairments, these patterns highlight vulnerabilities that may elevate chronic disease risk, reduce quality of life, and increase demand across health and social service systems.

These results provide essential, community-specific evidence to inform the 2027–2029 HCAAA Area Plan. Insights into unmet basic needs, caregiving burden, and gaps in health access will directly guide priority setting, resource allocation, and the development of strategies designed to strengthen aging-in-place supports, expand caregiver assistance, and improve access to preventive health services for diverse older adult populations.

Interpretation of the findings should consider several limitations. Although responses were received from 120 ZIP codes, only 51 had five or more respondents, limiting ZIP code-level estimates. The use of a convenience sample limits generalizability, and small subgroup sizes reduce the reliability of subpopulation analyses. Self-selection and self-report biases—related to literacy, recall, and access—may further influence estimates. Additionally, exact ages were

not collected, complicating the weighting of respondents under age 60 and potentially affecting the weighted results.

An important emerging question is whether caregiver burden contributes to lower uptake of preventive care among older adults, or whether unmet basic needs—such as transportation or access to technology—serve as more significant barriers. While this assessment suggests potential interactions among these factors, additional research is needed to better understand causal pathways and to identify interventions that effectively support both caregivers and care recipients.

Overall, the assessment provides a robust evidence base for shaping an equitable and responsive Area Plan that addresses the most pressing health and caregiving challenges facing Harris County’s aging population.

Goals, Objectives, Strategies, and Outcomes

Goal 1: Support older adults to age in their community by accessing available resources, including home and community-based services.

Objective 1.1.1: Ensure older adults and caregivers know where and how to access Aging Network supports.

Strategies:

- Expand targeted outreach through community, faith-based, and health organizations, and enhance visibility by promoting HCAAA services through multiple digital platforms.
- Enhance Information, Referral, and Assistance (IRA) services by increasing coordination with 2-1-1 Texas and 3-1-1 Houston.
- Build workforce capacity by expanding pathways and advancement opportunities for Direct Care Workers and Community Health Workers.

Outcomes:

- Short Term: The effectiveness of outreach is demonstrated by an increase in call volume.
- Intermediate Term: Pilot innovative HCBS delivery models (mobile units, neighborhood care hubs) that expand access to care; Partner with healthcare systems, Medicare, and Medicaid providers to further delivery of service. Greater engagement with community partners.

- Long-Term: Enhanced public awareness of available resources via a centralized campaign dashboard that brings together information from different channels, including digital, print, broadcast, and community outreach.

Objective 1.1.2: Expand Person-Centered, Trauma-Informed, and Culturally Responsive Service Delivery

This aligns with State Objective 1.1.2.

Strategies:

- Integrate person-centered and trauma-informed practices into all HCAAA programs, staff training, and provider contracts.
- Foster culturally appropriate service planning to address the diversity of Harris County’s older adult population.

Strengthen collaboration with healthcare and community providers to understand individualized needs and outcomes.

Outcomes:

- Short-Term: HCAAA staff and contracted providers demonstrate increased knowledge and consistent application of person-centered, trauma-informed, and culturally responsive practices through updated training, service protocols, and documentation.
- Intermediate Term: Older adults and caregivers report feeling more respected, understood, and empowered in care decision-making as services begin to reflect individualized needs, cultural preferences, and trauma-informed approaches, as evidenced through survey feedback.
- Long-Term: HCAAA achieves system-wide integration of person-centered, trauma-informed, and culturally responsive service delivery, resulting in improved service engagement, stronger provider-client relationships, and measurable improvements in health and well-being outcomes for diverse older adults across Harris County.

Objective 1.1.3: Promote Community Engagement, Social Connection, and Health Promotion Programs

This aligns with State Objective 1.1.3.

Strategies:

- Increase access to evidence-based health and wellness programs across Harris County, especially in high-risk and underserved areas.
- Expand opportunities for volunteerism and intergenerational programs for older adults.
- Promote “Age Well, Live Well” and other initiatives that reduce isolation and strengthen community connectedness.

Outcomes:

- Short Term: Older adults gain improved access to wellness, exercise, and social engagement opportunities as HCAAA expands evidence-based programs and community offerings across the county.
- Intermediate Term: Older adults experience increased social connection and reduced feelings of isolation as participation in wellness, volunteer, and intergenerational programs grows.
- Long-Term: Harris County communities become more supportive and connected, with older adults regularly engaging in health promotion, social activities, and meaningful community roles that contribute to long-term well-being.

Goal 2: Increase awareness about caregiving and the support available.

Objective 2.1.1: Expand public awareness of caregiver identity and available supports.

Strategies:

- Implement targeted outreach campaigns across digital, face-to-face, and social media platforms, spotlighting family caregivers as a key population.
- Promote Caregiver Support Program services through digital platforms, partner networks, and 2-1-1 Texas referral pathways.
- Prioritize outreach to underserved caregivers in high-need zip codes identified through local needs assessments.

Outcomes:

- Short-Term Outcome: Increased awareness of caregiving and available supports.
- Intermediate Outcome: Strengthen caregiver self-identification by ensuring more individuals recognize their caregiving role and engage with available resources.
- Long-Term Outcome: Residents in hard-to-reach priority ZIP codes will have increased awareness of available caregiver resources through targeted outreach efforts.

Objective 2.1.2: Increase utilization of caregiver support services in alignment with the National Strategy to Support Family Caregivers.

Strategies:

- Incorporate caregiver screening questions into routine client intake and assessment processes.
- Strengthen the referral pathways within the aging network to identify better caregivers who need supportive services.
- Conduct comprehensive benefits screening for caregivers supporting individuals eligible for Low Income Subsidy (LIS) and Medicare Savings Programs (MSP).

Outcomes:

- Short-term: Reduced caregiver stress and burden.
- Intermediate: More caregivers are identified through intake and referral pathways and increasingly access supportive services and benefits that help reduce their financial burden.
- Long-term: Reduced risk of premature institutional placement of care recipients.

Objective 2.1.3: Align caregiving efforts with National Lifespan Respite Care objectives.

Strategies

- Promote awareness of Lifespan Respite Care objectives among caregivers and community partners so they understand what respite is, why it matters, and how to access it.
- Identify barriers that prevent caregivers from accessing respite services or voucher programs by gathering information during intake, assessments, and interactions with caregivers.
- Educate the community about the GUIDE model available to traditional Medicare beneficiaries to increase understanding of navigation, support services, and respite options offered through GUIDE.

Outcomes

- Short-term: Barriers to respite access are identified and documented through intake, assessments, and caregiver interactions.
- Intermediate: Awareness of the Guiding an Improved Dementia Experience (GUIDE) model increases among caregivers and community organizations, leading to more caregivers being directed to GUIDE-related navigation and support resources.

Long-term: The community has a stronger, more coordinated understanding of respite and GUIDE services, leading to more equitable access to caregiver support over time.

Goal 3 – Improve communication and collaboration among Harris County agencies, providers, and community-based organizations

Objective 3.1.1: Formalize and strengthen cross-agency coordination structures.

Strategies:

- Participate in statewide AAA network meetings and peer learning collaboratives.

- Hold semi-annual meetings with sub-recipients and contractors to increase awareness of HCAAA services and supports, best practices, and provide networking opportunities.
- Participate in local regular coordination meetings, case discussions, or partner updates—to maintain alignment and address emerging needs among older adults and caregivers.

Outcomes:

- Short-Term Outcome: Improved communication and information sharing across agencies through regular participation in statewide, local, and partner meetings.
- Intermediate Outcome: Stronger coordination among HCAAA, sub-recipients, and community partners resulting in more consistent alignment around services, needs, and best practices.
- Long-Term Outcome: An improved and well-coordinated network of aging services that supports older adults and their caregivers.

Objective 3.1.2 Expand collaboration with community-based organizations (CBOs) to address social determinants of health.

Strategies:

- Engage and encourage CBOs targeting underserved populations to screen for social determinants of health (SDOH).
- Strengthen coordination with Community Assistance Transitions of Care Houston (CATCH) to support older adults during care transitions and connect them with community-based services that address social determinants of health.
-

Outcomes:

- Short term: Increase the number of community partners to improve access to services and screen for SDOH.
- Intermediate: Develop memorandums of agreement with CBOs to provide services to clients identified through social determinant of health screening within priority zip codes.
- Long-term: Greater integration of aging services within community health systems.

Objective 3.1.3: Strengthen emergency preparedness coordination across the aging services network.

Strategies:

- Participate in City of Houston Joint Tabletop Exercises and preparedness trainings.
- Assist older adults and their caregivers in registering annually for the State of Texas Emergency Assistance Registry (STEAR)

Incorporate emergency preparedness questions and guidance into routine assessments and interactions with older adults and caregivers to help identify readiness needs and share essential emergency information.

Outcomes:

- Short term: Increase awareness among older adults and caregivers by using mass communication channels to remind and inform clients about the annual State of Texas Emergency Assistance Registry (STEAR) registration period.
- Intermediate: Increase the number of older adults and caregivers successfully enrolled in the State of Texas Emergency Assistance Registry (STEAR) each year, ensuring vulnerable individuals receive priority support during disasters.
- Long-term: Older adults and caregivers maintain improved personal emergency plans and preparedness behaviors through ongoing guidance provided during HCAA assessments and service interactions.

Goal 4: Strengthen Aging Services Network Infrastructure

Objective 4.1.1: Enhance communication and innovate practices to improve operations and service quality.

Strategies

- Utilize the Interactive Voice Response (IVR) to track call patterns, frequent menu selections, to refine the IVR script, shift staffing during peak times, identify service gaps, and improve customer service.
- Utilize artificial intelligence to provide faster access to information, reduce intake center bottlenecks, and create a smoother, more supportive experience for older adults and their caregivers.

Outcomes

- Short-term: Train intake center staff on how to interpret IVR analytics and respond to trends identified through call patterns.
- Intermediate: Achieve a measurable reduction in average call-wait times and a sustained increase in customer satisfaction ratings.
- Long-term: Achieve a measurable reduction in average call-wait times and a sustained increase in customer satisfaction ratings. Use IVR data to identify and address common service gaps, producing quarterly service improvement reports and implementing at least two system improvements per year based on findings.

Objective 4.1.2 Develop and implement a person-centered process that identifies home-delivered meal participants' preferences, interests, and readiness to transition to or participate in congregate meal sites and related health and wellness activities.

Strategies

- Survey and assess the needs of home-delivered meal participants' preferences, interests, and potential barriers related to participating in congregate meal sites and associated health and wellness activities.
- Pilot with 10–20 home-delivered meal participants.
- Implement the transition process for interested home-delivered meal participants to begin receiving their meals at a congregate meal site of their choice and to participate in on-site health and wellness activities.

Outcomes

- Short-Term: Distribute a survey among the targeted population to capture preferences and support transitions to congregate meal sites and wellness activities.
- Intermediate: Participant feedback collected during the pilot will be used to refine and improve the transition process before full implementation.
- Long-Term: Home-delivered meal participants who choose the congregate meal option experience improvements in social connection, nutrition access, and overall well-being within a person-centered nutrition program.

Objective 4.1.3 Support older adults by providing meal options to foster individual consideration and preferences.

Strategies

- Conduct a comprehensive, time-limited review of culturally appropriate and medically tailored meal options to determine their feasibility, including the assessment of potential cost increases associated with implementing these enhanced nutrition services.
- Implement Grab & Go on-site and off-site meal options at congregate meal locations, promoting socialization, reducing hunger, food insecurity, and malnutrition.

Outcomes

- Short-Term: Increased opportunity for brief social interactions during pick-up.
- Intermediate: Reduce feelings of loneliness, strengthen social engagement, which impacts their emotional, physical, and mental well-being, and prevents early institutionalization.
- Long-Term: More flexible meal options will address and support the older adults' evolving lifestyle, keeping them physically and nutritionally fit.

Objective 4.1.4 Strengthen efforts related to dementia and Alzheimer's Disease.

Strategies

- Strengthen in-home services, including support for families of older adults who are affected by dementia.
- Offer one-on-one information sessions at educational health fairs, outreach events, and community engagement activities focused on creating dementia-friendly environments.
- Promote the resources and services available through the HCAA Care Coordination program.
- Use the Texas Community Health Worker Program (CHW) to certify or upskill CHWs with dementia awareness modules; deploy them for home visits, health fairs, and church-based talks.

Outcomes:

- Short-term: Pilot 4 Toolkit pop-ups at Multi-Service Centers; collect attendance and pre/post awareness surveys.

- Intermediate: Train CHWs in dementia awareness and caregiver referral pathways.
- Long-term: Countywide sector adoption: At least 50 organizations adopt dementia-friendly practices (businesses, libraries, restaurants, faith communities, public safety).

Objective 4.1.5 Increase awareness of available resources and services for older individuals living with Human Immunodeficiency Virus (HIV) and Acquired Immune Deficiency Syndrome (AIDS).

Strategies

- Coordinate with the Houston Health Department HIV program to provide educational sessions at each of the thirty-three congregate programs.
- Coordinate with Harris County Public Health to include HIV testing/counseling and older adult-focused messaging at their clinics
- Partner with HIV Mobile Testing Unit to host “Aging & HIV” community pop-ups

Outcomes:

- Short-term: Increase the number of older adults reached through initial HIV education delivered at community events in partnership with the Houston Health Department, Harris County Public Health clinics, and mobile testing teams.
- Intermediate Outcome: Awareness and testing increase as regular community-based HIV education sessions, clinic-based messaging, and routine mobile “Aging & HIV” pop-ups expand across Harris County
- Long-Term Outcome: A sustained, county-wide network of community partnerships provides ongoing HIV education, testing, and linkage to care for older adults, resulting in improved early detection and increased access to supportive services.

Objective 4.1.6 Increased awareness of existing public transportation services, the availability of volunteer and private transportation programs, and knowledge of accessible and assisted transportation services for older individuals.

Strategies

- Increase awareness of safe and reliable transportation options to increase mobility and community participation through Harris County Transportation modalities by adding the link to the HCAAA website.
- Partner with regional transit providers to teach older adults how to use public buses, paratransit, and on-demand services safely.

Outcomes:

- Short Term: Increase awareness of Harris County transportation options by adding transportation resources to the HCAAA website
- Intermediate: Expand partnerships and contractual agreements with community-based organizations to increase transportation access.
- Long-term: Create a long-term outcome for educating older adults about safely using public buses, paratransit, and on-demand services.

Long Range Planning

Demographics and demand. Texas' 60+ population is the fastest-growing age group and will continue to expand through 2035–2040, with metro areas in the “Texas Triangle” (including Houston) capturing most of the growth. The Houston-Galveston Area Council 2024 Regional Growth Forecast shows sustained population and employment growth across the 8-county TMA, with Harris County remaining the largest hub, implying rising demand for aging services, transportation, and housing supports.

Affordability pressures. Housing costs have outpaced incomes, and roughly one-third of Texas households with adults aged 60+ are cost-burdened, increasing the risk of food/medicine trade-offs and instability.²⁰ This directly affects demand for nutrition services, benefits counseling, and case management.

Workforce constraints. Texas—like the nation—faces a shortage of direct care workers, constraining home- and community-based services. Vacancy rates and low wages in community attendant roles are increasing overtime, closures, and waitlists—pressuring AAAs to innovate and partner across systems.

Bottom line: The Harris County AAA is well-positioned in a robust local network anchored by the Houston Health Department, but must scale transportation, housing navigation, caregiver supports, and digital inclusion, while building diversified funding streams (e.g., Medicare-aligned care coordination) and advocating to strengthen the direct care workforce pipeline.

1) How programs, services, and policies can improve; how resources can be adjusted

Strengthen care coordination at scale.

Expand integrated care transitions and chronic disease management programming by aligning with hospital systems and primary care to reduce readmissions and accelerate safe discharges—leveraging AAA’s information & assistance, nutrition, and transportation.

Scale housing navigation & prevention

²⁰ Fechter, J. (2023, November 30). *More than 765,000 older Texans are struggling to cover housing costs.* *The Texas Tribune*. Retrieved March 31, 2026, from <https://www.texastribune.org/2023/11/30/texas-seniors-housing-costs/>

Work with the City of Houston Housing Department, Aging Disability Resource Center (ADRC), and the Housing Alliance HTX, to create a “rapid response” function: benefits counseling + legal assistance + utility mediation + partnerships to prevent displacement among cost-burdened seniors.t Data trends justify prioritizing single-adult and renter households.

2) Recommendations to the State Unit on Aging (SUA) to build statewide capacity

Housing

Fund AAA-led housing navigation and eviction prevention pilots (legal aid + utility assistance + rent mediation + case management), prioritizing single-adult older renters.

Transportation

Public Safety & Emergency Preparedness

Support a statewide older-adult emergency registry standard; fund battery-backup/medical device readiness kits through AAAs.

Partner with Medicaid and workforce agencies to raise community attendant wages and launch paid apprenticeships; scale technical assistance via the Direct Care Workforce Strategies Center to improve recruitment/retention.

Education (Digital inclusion)

Accelerate broadband/digital literacy initiatives for older adults to enable telehealth, benefits access, and fraud prevention.

Protection from Elder Abuse, Neglect, and Exploitation

Strengthen collaboration and data sharing between Adult Protective Services and the Area Agency on Aging; expand Senior Justice Assessment Center models (e.g., Harris County’s model) statewide to address exploitation/self-neglect through multidisciplinary responses.

3) Organizational sustainability planning (AAA)

A. Revenue diversification through the Community Assistance of Transitions of Care (CATCH) – Houston Community Care Hub

What we're building. The AAA is working with the Community Assistance of Transitions of Care Houston (CATCH), a Community Care Hub, to deliver care-coordination services that align with Medicare-reimbursable pathways (e.g., transitions support, chronic care coordination) through collaborative billing and provider partnerships. Revenue generated will be reinvested to expand capacity for core AAA services (nutrition, transportation, case management, caregiver support).

Why is this timely? ACL's 2024 fiscal rule clarifies the state agency's responsibility to establish flexible and streamlined processes for AAAs to obtain approvals for contracts and commercial relationships, enabling AAAs to engage in compliant business activities that augment OAA funding. We will work with HHSC (SUA) to ensure our agreements, program income handling, and reporting fully align with the updated regulations and state procedures.

B. Needs assessment to prioritize the "greatest economic and social needs."

Older adults are living and working longer. As longevity increases and the labor force decreases, service needs are more complex (e.g., benefits counseling on Medicare/Medicaid/ESI, caregiver support for working caregivers, flexible transportation). The Texas State Plan on Aging 2026–2028 emphasizes data-guided targeting of greatest need; we will refresh our comprehensive needs assessment to sharpen geographic/household targeting, equity lenses, and service mixes—stretching current funding to those with the highest economic and social vulnerabilities.
