Immunizations

What to know
Immunizations are a core prevention strategy to lower risk from respiratory viruses. Core prevention strategies are important steps you can take to protect yourself and others from respiratory viruses.

Recommendation
Stay up to date with the immunizations that are recommended for you.
- For most people that means getting a current flu and COVID-19 vaccine.
- Adults ages 60 years and older should talk to their healthcare provider about whether an RSV vaccine is right for them.
- To prevent severe RSV disease in infants, CDC recommends either the pregnant mother gets an RSV vaccine, or the infant gets an immunization with an RSV monoclonal antibody. Most infants will not need both.

How it works
Immunizations help prepare your body to defend itself from viruses and severe illness. Some immunizations teach your immune system what the virus looks like so it can prepare to protect against it. Other immunizations directly provide you with antibodies to protect you from the virus. Getting vaccinated can reduce your chances of getting infected to some degree, but its main strength is preventing severe illness and death. More and more evidence suggests that the COVID-19 vaccine can also lower your chances of developing Long COVID.

Steps you can take

Individuals can
- Talk with a healthcare provider to make sure you are up to date on vaccines.
- Review the vaccine schedule to become familiar with the immunizations recommended for you and when you should get them.
- Visit www.vaccines.gov to locate flu and COVID-19 vaccines near you.
- Learn more about how vaccine recommendations are made.
- Talk to your friends and family about the benefits of getting vaccinated.

Organizations can
- Organize vaccination clinics at workplaces. This helps with staff accessing vaccines.
- Partner with trusted community members (such as doctors, nurses, health educators, or faith-based and community leaders) and have them attend vaccination events to share accurate information about vaccines.
- Provide employees with paid time off to get vaccinated and recover from any side effects.

Key times for prevention
All of the prevention strategies described in this guidance can be helpful to reduce risk. They are especially helpful when:
- Respiratory viruses are causing a lot of illness in your community.
- You or the people around you were recently exposed to a respiratory virus, are sick, or are recovering.
- You or the people around you have risk factors for severe illness.

CDC offers separate, specific guidance for healthcare settings (COVID-19, flu, and general infection prevention and control). Federal civil rights laws may require reasonable modifications or reasonable accommodations in various circumstances. Nothing in this guidance is intended to detract from or supersede those laws.
